

Using the #20-320 90-degree Crossing

The #20-320 90-degree Crossing can be one of the most exciting track sections used on a layout. Below are the configuration and dimensions of a single-track crossing, a double-track crossing and “a whole lotta fun” 2 X 2 crossing. When two crossings are used side-by-side, the distance between the centers of the two is 33mm, important to recognize as *UNITRACK* is designed on a 33mm track center foundation.

Please note that (4) pieces of 45.5mm Straight Track are included in the package with the 90-degree crossing core. The 29mm Straight Track is available only in the #20-091 Track Assortment Set.
